Info Table: Name,Birth_Date, End_date

Used count and group by Birth_Date

Used count and group by End_date

Birth_Count:year,birth_count

End_Count:year,end_count

Added data from both the tables to merge table using inner join and calculated people alive count for each year and saved it in people alive column.

Merger: year,birth_count,end_count,people_alive

Finally ran a query to pull the year in which most people were alive
